

INTRO TO WEB / COURSE

1. Understanding Web Basics .
2. Guidance About Career Paths in Web Dev .
3. Understanding Frontend , Server , Database .
4. Understanding Development and Deployment .
5. Understanding Client Side Rendering , Server Side Rendering.
6. Checking about Other Tech Stacks for Web Development .
7. Understanding Why to choose MERN

HTML

1. Introduction to HTML
2. Text Formatting and Links
3. Lists and Images
4. Tables and Forms
5. HTML5 Semantic Elements
6. HTML Forms and Input Types
7. Embedding Media
8. HTML Forms and Labels
9. HTML Meta Tags and SEO
10. HTML and CSS Integration
11. Responsive Web Design
12. HTML Forms and JavaScript Interaction

CSS

1 Introduction to CSS

What is CSS (Cascading Style Sheets)?

The role of CSS in web development

CSS syntax and structure

Inline, internal, and external CSS

2 CSS Selectors and Properties

CSS selectors (element, class, ID, descendant, etc.)

Applying styles with CSS properties (color, font-size, margin, padding)

Understanding the box model

Using the '!important' declaration

3 Working with Colors and Backgrounds

Specifying colors (hex, RGB, named colors)

Background properties (background-color, background-image)

Gradient backgrounds

Applying backgrounds to different elements

4 Text and Font Styling

Font properties (font-family, font-size, font-weight)

Text properties (text-align, text-decoration, text-transform)

Web fonts and using '@font-face'

Styling text links

5 Box Model and Layout

Box model properties (margin, padding, border)

Understanding the differences between inline and block elements

Controlling element dimensions (width and height)

Working with the 'display' property

Understanding pseudo-classes (e.g., :hover, :focus, :nth-child)

Pseudo-elements (e.g., ::before, ::after)

Creating advanced styles using pseudo-selectors

Applying CSS to form elements

9 CSS Positioning and Floats

Positioning properties (static, relative, absolute, fixed)

Floats and clearing floats

Creating multi-column layouts with CSS

The 'z-index' property for layering elements

10 Responsive Web Design

Introduction to responsive design principles

Media queries and breakpoints

Fluid grids and flexible images

Making existing websites responsive

JavaScript

1. Introduction
2. variables (let , const , var)
3. Primitives and Objects
4. Operators and Expressions
5. Conditional Expressions
6. Loops
7. Functions
8. Strings and its methods
9. Arrays and its methods using loops with it
10. Map, filter and Reduce

11. JAVA SCRIPT IN BROWSER(alert , prompt , confirm)
12. DOM,BOM, Window Object
13. Working with DOM
14. Matches , closet and contains
15. innerHTML, outerHTML
16. HTML Attributes , insertion methods
17. setInterval , setTimeout in js
18. Intro To Browser Events
19. Handling Browser Events
20. Callbacks Functions
21. Promises / Promise API
22. Async Await
23. try Catch Error handling
24. Fetch API
25. Sending POST Request with API
26. Cookies in js
27. Local Storage and its methods
28. Classes and objects
29. Constructors
30. Inheritance and Extends Keyword
31. Spread and rest operator
32. Local and Global Scope
33. Hoisting / Closures
34. Arrow Functions
35. JAVA SCRIPT ON SERVER
36. npm / node.js packages
37. Concept of module
38. Event loops in js

Node Js

- Asynchronus Javascript
- node.js modules
- file system and streams
- http and networking
- RESTfull API's
- Express Js

Express js

- installation and About
- Http request
- Middle Wares
- Sending data via URI
- REST API With Express

Mongo DB

CRUD Operations in Mongo DB
